

## CSC-TOOL SE ADAS

### ADAS CALIBRATION SYSTEM

The CSC-Tool SE is a flexible, modular system that can be specified to meet a range of workshop requirements and its design enables accurate results to be achieved. New features help to save valuable workshop time by making it even quicker and easier to make the fine adjustments necessary to meet the calibration pre-conditions.

### MAIN FEATURES

- One person only required for spring-supported height adjustment of the cross member
- Option to adjust to different camera and radar systems
- Base support with recesses for extremely low positioning of the angular adjustment plate
- Upgradeable at any time
- Documentation of adjustment/calibration as hard-copy printout and in the Car History
- Excellent measuring accuracy
