

THINKCAR VENU 90

TPMS Activation Diagnostic Tool

The VENU 90 is a sophisticated tyre pressure tool that integrates sensor activation, programming, and learning capabilities. It features a new industrial design with sleek lines and an attractive appearance. Equipped with a WiFi upgrade function, it supports comprehensive programming for a wide array of sensors from THINKCAR, including THINKCAR, VENU, and others. The device is compatible with 99% of vehicle models on the market and effortlessly activates dual-frequency tyre pressure sensors at 315MHz and 433MHz. Beyond just sensor activation, the VENU 90 also offers TPMS diagnostics with features such as barcode scanning, code resetting, and data stream reading. This makes tyre pressure management and maintenance tasks a breeze for any vehicle owner. With the VENU 90, managing your tyre pressure has never been easier.

Features

- Support 98% vehicles
- Dual Frequency, both 315MHz & 433MHz sensors
- Support WI-FI free update
- Unlimited times programming THINKCAR TPMS sensors
- Support TPMS diagnosis, read and clear fault codes, read live data stream
- Integrated TPMS sensor activation, programming and relearn function

Specifications

Model	VENU 90
Battery	315MHz/433MHz
Size (Without cable)	205x89x33.5mm
Working temperature	-10°C - 50°C
Storage temperature	-20°C - 50°C
